

INDIANA CORN FARMERS HELP MAKE DINNER TIME MORE SUSTAINABLE.

A burger and bourbon are part of a great meal you can feel good about. It starts with corn.

GOOD FOR THE SOIL

In Indiana, about 25% of corn is grown using no-till farming, which reduces soil erosion and the release of carbon.

CORN = BOURBON

Some of that corn gets sent to the over 40 local distilleries to become bourbon. To be considered bourbon, it must be made in United States and least 51% corn.

CORN FED CATTLE

The grain left over from the bourbon making process is sent to local farmers to help feed the nearly 900,000 beef cattle raised annually in Indiana.

Farmers care about the food your family eats and ensure it's grown sustainably.
